# Water Sector Research and Data Analysis

## VIRTUAL STUDENT FEDERAL SERVICE

## VSFS

| | |
|---|---|
| Project Title | Water Sector Research and Data Analysis |
| Project Summary | Work with USAID's E3 (Office of Economic Growth, Education and Environment) Water Office to increase water sector program communication, knowledge sharing and learning, as we seek to improve access to safe and adequate water supply and sanitation and manage water resources to enhance food security. |
| Country | United States |

# Project Description

USAID's E3/Water team developed the website Globalwaters.org as a central hub where water sector practitioners and others can find information and data about water-related activities of USAID, its partners and others. The website provides a central hub for technical documentation, upcoming events, and current news, as well as information about USAID water projects and the countries receiving aid to support those projects. The website was launched one year ago and the team is still actively adding content and features. To assist with these efforts, E3/W seeks an intern to support research and data activities to enhance the website, including:

- Review, research, and update water project data
- Review, research, and update country data
- Contribute toward the structure and utilization of the data
- Utilize strong spreadsheet skills, familiarity with content management systems such as Drupal

# Required Skills or Interests

| Skill(s) |
|---|
| Data analysis |
| Data visualization |
| Infographic design |
| Research |

# Additional Information

You will be part of a team of two interns. The other will support Water Sector Communication, Knowledge Management and Research.
